Event Title: Session on “ARDUINO DAY ”

Speaker: Hemalatha, Technical Lead, OHD Pvt. Ltd., Hyderabad

Gist of the Event:

Speaker delivered Concepts on “ARDUINO DAY” and covered following Concepts:

About Arduino Day

Arduino Day is a worldwide birthday celebration of Arduino. It's a 24 hour-long event – organized directly by the community, or by the Arduino founders – where people interested in Arduino get together, share their experiences, and learn more.

Who Can Participate?

All user groups, makerspaces, hackerspaces, fablabs, associations, teachers, professionals, and newbies are welcome.

What Can You Do During Arduino Day?

You can attend an event or organize one for your community. It doesn't matter whether you are a Maker, an engineer, a designer, a developer or an educator: Arduino Day is open to anyone who wants to celebrate Arduino and all the amazing things that have been done (or can be done!) with the open-source platform. The events will offer different types of activities, tailored to local audiences all over the world.

Organize a Community Event

In 2016, 330 events were held by members of the Arduino community spanning across the globe. This year, we are hoping to reach 500!
